WHISPERAIR DRY VACUUM

Tech West's Whisperair utilizes advanced technology in dry vacuum pump motors. Our system provides whisper quiet operation while supplying superior suction. The unit is completely self-contained and is shipped complete ready for installation. Our system can be installed on existing "wet" piping without the need to run new piping saving thousands of dollars. We use a solid state sensing system to drain the separator tank when it gets full. It is a simple and reliable design with no moving parts.

FEATURES

Whisper quiet operation at 65 decibels.

The Whisperair is shipped completely assembled from the factory.

The Whisperair utilizes advanced dry vacuum motor technology without veins or lubrication.

The Whisperair doesn't use any water at all.

The Whisperair utilizes cyclonic separation of the evacuated waste and doesn't need a vacuum trap.

BENEFITS

This allows the equipment to be installed anywhere in the office without concern of noise.

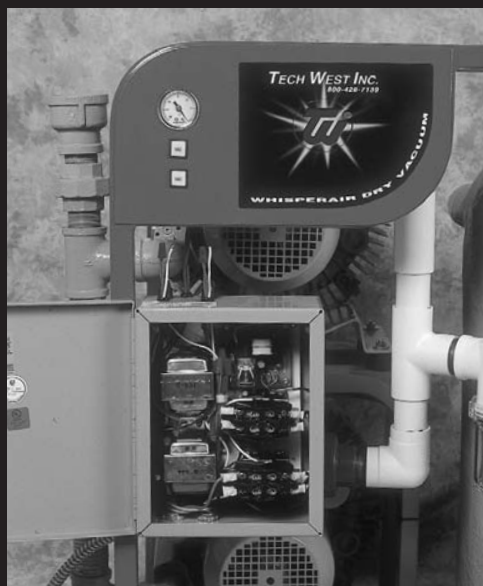

This saves on installation time and costs.

This makes the Whisperair virtually maintenance free and will outlast other motor technologies.

This will save thousands of dollars in water and sewer costs over years.

This eliminates the need to constantly clean and replace the trap screens like other Dry-Vacs.
